Recalling also its resolutions on the role of science and technology in the context of international security, in which, inter alia, it recognized that scientific and technological developments could have both civilian and military applications and that progress in science and technology for civilian applications needed to be maintained and encouraged,

Noting that considerable progress has been achieved in developing and applying the latest information technologies and means of telecommunication,

Affirming that it sees in this process the broadest positive opportunities for the further development of civilization, the expansion of opportunities for cooperation for the common good of all States, the enhancement of the creative potential of humankind and additional improvements in the circulation of information in the global community,

Considering that the assessments of the Member States contained in the reports of the Secretary-General and the international meetings of experts have contributed to a better understanding of the substance of issues of international information security and related notions,

Bearing in mind that the Secretary-General, in fulfilment of resolution 58/32, established in 2004 a group of governmental experts, which, in accordance with its mandate, considered existing and potential threats in the sphere of information security and possible cooperative measures to address them and conducted a study on relevant international concepts aimed at strengthening the security of global information and telecommunications systems,

2. *Considers* that the purpose of such measures could be served through the examination of relevant international concepts aimed at strengthening the security of global information and telecommunications systems;
